-!-FUNCTION: CHEWOTACTIC FACTOR THAT ATTRACTS MONOCYTES, IYMPHOCYTES,
BASOPHILS AND EOSINOPHILS, BUT NOT NEUTROPHILS. SIGNALS THROUGH
CCREB AND CRR RECEPTORS. PLAYS A ROLE IN THE ACCUMULATION OF
LEUKOCYTES AT BOTH SIDES OF ALLERGIC AND NONALLERGIC INFLAMMATION.
MAY BE INVOLVED IN THE RECRUITMENT OF MONOCYTES INTO THE ARTERIAL
WALL DURING THE DISEASE PROCESS OF ARTHEROSCLEROSIS. MAY PLAY A
ROLE IN THE MONOCYTE ATTRACTION IN TISSUES CHRONICALLY EXPOSED TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -i- PTM: ONE MAJOR ISOFORM MCP-4, AND TWO MINOR ISOFORMS (LA)MCP-4 AND (FUNDGLA)MCP-4 ARE PRODUCED BY DIFFERENTIALS SIGNAL CLEAVAGE.
(LA)MCP-4 IS ABOUT 30 FOLD LESS ACTIVE THAN MCP-4.
-i- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MASS SPECTROMETRY: MW=9314; MW_ERR=30; METHOD=MALDI; RANGE=17-98. MASS SPECTROMETRY: MW=676; MW_ERR=30; METHOD=MALDI; RANGE=22-98. MASS SPECTROMETRY: MW=8575; MW_ERR=30; METHOD=MALDI; RANGE=24-98. INDUCTION: BY INTERLEDEX.NY-1 AND TNF-ALPHA.

TISSUE SPECIFICITY: WIDELY EXPRESSED. FOUND IN SMALL INTESTINE. THYMOS. COLON. LUNG, TRACHEA, STOMACH AND LYMPH NODE. LOW LEVELS SEEN IN THE PULMONARX RATERY SMOOTH MUSCLE CELLS.
                                                                        MEDLINE; 97341179.

                                                                                                                                                                                                                                                         DISCUSSION OF SEQUENCE.

MEDLINE; 97275308

WEDLINE TO.N.C., PEITSCH M.C.;

"The chemokine information source: identification and characterization of novel chemokines using the WorldWideWeb and expressed sequence tag databases.",

J. LEUKGC. BIOL. 61:545-550(1997).

-- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS LYMPHOCYTES BUT NOT MONOCYTES. RO RARMUTOCYTES. MAY BE INVOLVED IN B CELL MIGRATION INTO B CELL FOLLICLES IN LYMPH NODES.

-- TISSUE SPECIFICITY: EXPRESSED AT HIGH LEVELS IN THE LUNG. A LOWER LEVEL EXPRESSION. IS SEEN IN LYMPHOID TISSUES SUCH AS LYMPH NODES,

## ALIGNMENTS

```
Nucleic acids encoding secreted proteins from clones within ATCC 98076 - useful as immuno-modulators, anti-proliferative agents, requiators of cell differentiation and tissue growth, etc claim 26, Page 68; 99pp; English.

The present sequence represents the amino acid sequence of a secreted protein encoded by clone AM262_11. The clone was isolated from a human fetal kidney cDNA library using probe V05756. AM262_11 has some identity with the human ectaxin precursor gene and protein As such, the AM262_11 protein may share some activity. The nucleic acid can be used for expression of recombinant proteins, as tissue, molecular weight or chromosome markers, indicators of generate and sources of probes and primers. They can also be used to generate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    anti-protein or anti-DNA antibodies and as components of interaction trap assays etc. The protein is useful for raising antibodies, as immunoassay reagents and as nutritional supplements. The protein may possibly have any of a great variety of therapeutic activities.

The sequences given in WOOGF-66 represent pancreas-derived chemokines, PANEC-1 and PANEC-2. These chemokines are highly expressed and specifically expressed in the pancreas and may therefore be used in diagnostic assays based on chemokine production in cases of inflammation or disease affecting the pancreas. These assays allow the early and accurate diagnosis of pancreatic disorders, and can differentiate between invasive diseases and genetic syndromes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

N-PSDB: 75-787/700.

New isolated human eotaxin gene - used to develop prods. for the diagnosis and treatment of e.g. inflammation, allergies, auto-immune disease, infections and tumours in the diagnosis and treatment of e.g. inflammation, allergies, auto-immune disease, infections and tumours in the diagnosis and treatment of the diagnosis.

The present sequence is human eotaxin (hE), an eosinophil specific chemoattractant capable of stimulating eosinophils (including chemotaxis).

Treatment of hE associated diseases or conditions. The products can be used to treat inflammatory or allergic diseases and conditions, including respiratory allergic diseases or conditions. The products can be used to treat inflammatory of allergic diseases or penemonits.

Continuities hypersensitivity lung diseases or prememonits.

Consinophilic pneumonias such as Loeffler's sydtome and chronic eosinophilic pneumonias interstitial lung diseases (ILD) such as idiopathic pulmonary fibrosis or ILD associated with theumatoid arthritis, systemic lubus erythematosus (SIE), ankylosing spondylitis, systemic anaphylaxis or hypersensitivity or esponses, drug allergies (e.g. to penicillin and cephalosporins), insect sting allergies, inflammatory dermatoses (e.g. to penicillin and cephalosporins), insect sting allergies, inflammatory dermatoses (e.g. to penicillin and cephalosporins), insect sting allergies, inflammatory dermatoses (e.g. to penicillin and electrismic accema, and ulcerative colities, spondyloarthropathies, cercania and ulcerative colities, allergies or defection or vaculities, escende at a products and products can also be used to treat other rejection (e.g. in transplantation) including allocation of the skin or orditions requirement allocations requirement pages and cancers with leukocyte inflammatory responses, includi

therapy, such as corficosferoid therapy, which causes
immunosuppression), immunosuppression due to (e.g. congenital)
defliciency (e.g in eotaxin) or infectious diseases such as parasitic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                eosinophilic lung tissue obtained from Balb/c mice sensitised to ovalbumin. The amplification product was used as a probe to screen a human genomic library in vector EMBL3 SP6/T7 to obtain the hE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Degenerate primers based on the guinea pig eotaxin amino acid sequence were used for the reverse transcriptase polymerase chain reaction (RT-PCR) amplification of RNA isolated from inflamed,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ol-DEC-1997 (first entry)
Ol-DEC-1997 (first entry)
Human eosinocyte CC type chemokine eotaxin.
Human: eosinocyte; CC type; chemokine; eotaxin; calcium; skin; small intestine; agonist; screening; antagonist; inflammation; antibody; diagnosis; assay; disorder; asthma; allergy; atopic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

Guinea pig eosinocyte CC type chemokine eotaxin.
Guinea pig: eosinocyte; CC type; chemokine; eotaxin; calcium; skin; small intestine; agonist; screening; antagonist; inflammation; antibody; diagnosis; assay; disorder; asthma; allergy; atopic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 2; Pages 30-31; 45pp; Japanese.

The present sequence is the guinea pig eosinocyte, CC type chemokine, eotaxin, which increases calcium flux in guinea pig agonists and antagonists, which may be useful as anti-inflammatorles. An anti-eotaxin antibody may be used in diagnostic assays for eotaxin, which is implicated in inflammatorry disorders, e.g. asthma, other allergies and atopic skin
                                                                                                                                                                                                                                                                                                                                                                                                                     Human CC chemokine (eotaxin) active on eosinocytes - useful for screening for eotaxin (ant)agonist(s), e.g. for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             treating asthma and other inflammatory diseases.
Claim 6; page 31; 50pp; English.

Ebtaxin is useful for treatment of asthma or other diseases with an inflammatory component, especially accumulation of eosiniphils, e.g. rhinitis or eczema. Eotaxin is obtainable from bronchoalveolar lavage fluid of a subject after antigen challenge; from an inflammatory exudate fluid or from an in vitro culture of macrophages, lymphocytes, neutrophils, mast cells, airway cells, sequence 73 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                             Claim 2; Pages 27-28; 45pp; Japanese.
Claim 2; Pages 27-28; 45pp; Japanese.
The present sequence is the human eosinocyte, CC type
Chemokine, eotaxin, which increases calcium flux in human
eosinocytes and is a human analogue of guinea pig eotaxin. The
eotaxin was derived from human small intestine, and is a specific
agonist for human CC type chemokine receptor 3. It may be used to
screen potential agonists and antagonists, which may be useful as
anti-inflammatories. An anti-eotaxin antibody may be useful as
diagnostic assays for eotaxin, which is implicated in inflammatory
inflammation.
                                                                                                                                                                                   Human CC chemokine (eotaxin) active on eosinocytes - useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated chemo attractant protein, termed eotaxin - useful for treating asthma and other inflammatory diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ő

anti-inflammatory agent

Disclosure: Page 5: 27pp; English.

The present sequence represents an analogue, MCP-1 (10-76), of monocyte chemoattractant protein 1 (MCP-1). The analogue, which lacks the chemoattractant protein 1 (MCP-1). The analogue, which lacks the N-terminal amino acids 1-9 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of monocytes and other cells e.g. basophils and lymphocytes into inflammation sites. MCP-1 has been implicated in allergic and chronic inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding
                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                 Monocyte chemoattractant protein analogue MCP-1 (10-76). Truncated monocyte chemoattractant protein-1; inhibitor: receptor binding; anti inflammatory; basophil; lymphocyte; allergy; chronic inflammatory disease; arthritis; arteriosclerosis;

       NAME OF THE PROPERTY OF THE PR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 5; 27pp; English.

The present sequence represents an analogue, MCP-1 (11-76), of monocyte chemotractant protein-1 (MCP-1). The analogue, which lacks the chemotractant protein-1 (MCP-1), acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 creeptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammatory diseases. MCP-1 has been implicated in allergic and chronic inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably with 75:1 for prior art mutant 7ND.
                                                                                                                                                                      ó;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ô
MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably providing 508 inhibition of binding at a 25:1 ratio or less, compared with 75:1 for prior art mutant 7{\rm ND}. Sequence 66 AA;
                                                                                                                                                                      Gaps

The remaining truncated monocyte chemo:attractant protein-1 (MCP-1) - lacks MCP-1 activity and inhibits receptor binding, useful as anti-inflammatory agent

anti-inflammatory agent

anti-inflammatory agent

Claim 7; Page 5; 27pp; English.

Clemoattractant protein-1 (MCP-1). The analogue, which lacks the

Chemoattractant protein-1 (MCP-1). The analogue, which lacks the

N-terminal amino acids 1-8 of MCP-1). The analogue of MCP-1

as it lacks MCP-1 biological activity and inhibits binding to a MCP-1

CC receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into component of the architish arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding Cd is an anti-inflammatory diseases e.g. arthritish arteriors of MCP-1 for binding Cd is an anti-inflammatory diseases. The analogue competes more effectively with MCP-1 for binding CC inflammatory diseases in the inflammatory diseases. The analogue competes more effectively with MCP-1 for binding CC inflammatory diseases. The analogue formeter wersions of MCP-1 e.g. preferably providing 50% inhibition of binding at a 25:1 ratio or less, compared with 75:1 for prior art mutant 7ND.

                                                                                                                                                                                                                                                                                                                                       The present sequence represents an analogue, MCP-1 (8-76), of monocyte chemoattractant protein-1 (MCP-1). The analogue, which lacks the neterinal maino acids 1-7 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory agent to block of monocytes and other cells e.g. basophils and lymphocytes into inflammation sites. MCP-1 has been implicated in allergic and chronic inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding providing 50% inhibition of binding at a 25:1 ratio or less, compared with 75:1 for prior art mutant 7ND.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-JUL-1998 (first entry)

The fundamental contractant protein-1 (MCP-1) derivs. - are capable of inhibiting the monocyte chemo-attractant activity of and can be used to treat restenosis.

The endogenous MCP-1 and can be used to treat restenosis.

Solution of Page 11; 22pp; English.

Monocyte chemoattractant protein-1 (MCP-1) derivatives are mutated such that they inhibit the monocyte chemoattractant activity of endogenous.

MCP-1, provided that the derivative has not been modified by the substitution of 28-Tyr by Leu and/or 30-Arg by Val. Preferred mutations are: (1) substitution of 28-Tyr by Leu and/or 30-Arg by Nal. Preferred mutations of 28-Tyr by Leu and/or (4) deletion of amino acids 2-8. The present sequence is a specifically claimed human MCP-1 derivative based on the parent protein disclosed in Rollina, Molecular and Cellular Biology, Vol. 9, No. 11, pp. 4687-4655, Nov. 1989.

The peptides can be used to prevent restenosis, e.g. in patients
The present sequence refresents a monocyte chemoattractant peptide (MCP) designated GDCF-2. MCPs can be isolated from human glioma cell line U-105MG (e.g. present sequence) and peripheral blood monouclear leukocytes. MCPs are used for the treatment of neoplasms and infections in humans. Short peptides derived from MCPs can be screened to identify those that can blind to the monocyte receptor without stimulating a chemotactic response. These are potentially useful for treating inflammation associated with monocyte infiltration.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Anti-sense Monocyte Chemotactic Protein-1 oligo:nucleotide(s) -
useful for therapy or diagnosis of restenosis, etc.
Disclosure, Column 13-14; 16pp; English.
This is the amino acid sequence of the human monocyte chemoattractant
protein (MCP)-1, a member of the C-C chemokine family. MCP-1 is a potent
stimulator of monocyte chemotaxis and is produced by injured vascular
smooth cells thus attracting monocytes and macrophages which infiltrate
the injured area and release growth factor. This causes proliferation of
the vascular smooth cells resulting in restenosis. The gene sequence can
be used to generate antisense sequences e.g. T48093-7, which can be used
to inhibit in vitro MCP-1 prodn. by monounclear cells e.g. Lymphocytes or
macrophages, or smooth muscle cells, esp. in order to prevent vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human monocyte chemo-attractant protein-1 (MCP-1) derivs. - are capable of inhibiting the monocyte chemo-attractant activity of endogenous MCP-1 and can be used to treat restenosis.

Claim 5; Page 11; 22pp; English.

Monocyte chemoattractant protein-1 (MCP-1) derivatives are mutated such that they inhibit the monocyte chemoattractant activity of endogenous MCP-1, provided that the derivative has not been modified by the substitution of 28-Tyr by Leu and/or 30-Arg by Val. Preferred mutations are: (1) substitution of 28 Tyr by aspartate; (2) substitution of 24 prg by Phe; (3) substitution of 24 Arg by Ala; and/or (4) deletion of anino acids 2-8. The present sequence is a specifically claimed human MCP-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Fri Feb 4 18:02:23 2000; MasPar time 3.57 Seconds 134.678 Million cell updates/sec Run on:

Tabular output not generated.

>US-09-150-813-72 (1-12) from US09150813.pep 82 Description: Perfect Score:

1 KACLNPASPIVK 12 Sequence:

PAM 150 Gap 15 Scoring table:

122810 seqs, 40068593 residues Searched:

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

1:pirl 2:pir2 3:pir3 4:pir4 pir60

Mean 23.040; Variance 28.486; scale 0.809 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

#title IL-lalpha or tumor necrosis factor-alpha stimulate release of three NAP-1/IL-8-related neutrophil chemotactic proteins in human dermal fibroblasts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Proost, P.; De Wolf-Peeters, C.; Conings, R.; Opdenakker, G.;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Schröeder, J.M.; Persoon, N.L.M.; Christophers, E. J. Exp. Med. (1990) 171:1091-1100
Lipopolysaccharide-stimulated human monocytes secrete, apart from neutrophil-activating peptide l/interleukin 8, a second neutrophil-activating protein. NH-2-terminal amino acid sequence identity with melanoma growth stimulatory activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              #domain signal sequence #status predicted #label SIG\

                                                       There appears to be a second beta-thromboglobulin-like human gene.

There appears to be a second beta-thromboglobulin-like human gene.

Connective-tissue activating peptides (CTAP) are a group of proteins capable of activating connective tissue cells. CTAP-I.

II, -III and -P2, and -PMN are of lymphoid, tumor cell, human platelet, and polymorphonuclear leukcyte origin, respectively.

CTAP-III, a monomer isolated from platelets, stimulates DNA synthesis, mitosis, glycolysis, intracellular CAMP accumulation, prostaglandin E2 secretion, and synthesis of hyaluronic acid and sulfated glycosaminoglycan. It also stimulates the formation and secretion of plasminogen activator by human synovial cells.

Proteolytic removal of the first four residues of CTAP-III produces the active peptide beta-thromboglobulin, which is released from platelets along with platelet factor 4 and platelet-derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

```
has been modified by replacing the 2nd active domain (DLQ, R92319)
with an active domain from melanoma growth stimulating factor-alpha
(Gro-alpha, R98080). The resulting protein has the PF-4 lst active
(Gro-alpha, R98080). The resulting protein has the PF-4 lst active
(Gro-alpha, R98080). The resulting protein has the PF-4 lst active
commain, DLQ, before the 1st Cys residue, and the Gro-alpha domain
cys residue. A version with a signal peptide is given in R92318.
The sequence has been derived by mutagenesis of wild-type PF-4
(R99813). The novel chemokine shows higher activity than the wild-
cytype, and may be used to suppress proliferation of actively dividing
myeloid cells, as an adjunctive agent in chemotherapy or radiation
therapy, in therapy of myelogenous leukaemia, polycythaemia vera or
hypermegakaryocytopoietic disorders, or to detect, isolate and expand
propenitor cells ex vivo for transplantation. The protein does not
show adverse neutrophil activation or inflammatory side-effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating and preventing sepsis in animals - by using two modified gro b chemokines in conjunction with an anti-infective agent gro b chemokines in conjunction with an anti-infective agent sample 1; Page 18; Zepp; English.

This is the amino acid sequence of the human gro-alpha chemokine mature polypeptide. The invention relates to a method of preventing and treating sepsis using chemokines selected from mature or modified murine KC (see W81499), or human gro-alpha, gro-beta (see W81499) or gro-gamma (see W81499). A claimed method uses a dimer composed of 2 modified gro-beta chemokines. Further claimed is administering the chemokine in conjunction with an anti-infective agent. The chemokine in conjunction with an anti-infective creat and prevent sepsis since antimicrobial agents alone have
